Statement on MCS005 Certification

To whom it may concern,

REC presently finds itself in the situation where its current certification body for MCS 005 in the UK has withdrawn from the scheme. This has necessitated a re-start of the MCS 005 certification process with another certification body.

REC has engaged BRE Group in the UK to manage this. An audit of REC's manufacturing facility in Singapore according to MCS 010 standards was already carried out by TÜV Rheinland on December 13, 2022. The process is expected to take a further 8-10 weeks to complete fully, including technical review and verification of test reports.

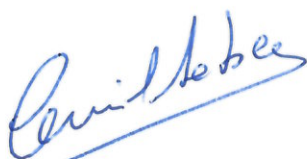

The products being audited are as listed below:

- REC Alpha Pure-R Series (RECxxxAA Pure-R)
- REC Alpha Pure Series (RECxxxAA Pure)
- REC TwinPeak 5 Series (RECxxTP5)
- REC TwinPeak 5 Black Series (RECxxTP5 Black)
- REC TwinPeak 4 Series (RECxxTP4)
- REC TwinPeak 4 Black Series (RECxxTP4 Black)

REC will endeavor to keep customers and partners up to date with the latest news as this certification process progresses.

For any further questions, please contact your local REC representative.

Kind regards,

Cemil Seber
